JAVA — DAY 1 Variables, Data Types and Operators

Practice Questions with Java Solutions

1. Display Student Details

Question: Declare variables to store a student's roll number, age, and percentage. Assign values and display them.

```
public class Main {
```

2. Add Two Numbers

Question: Read two integer values from the user and print their sum.

```
import java.util.Scanner;
```

3. Perform Arithmetic Operations

Question: Read two integers and display addition, subtraction, multiplication, division, and remainder.

```
import java.util.Scanner;
```

4. Calculate the Area of a Rectangle

Question: Read the length and breadth of a rectangle. Calculate and print its area.

```
import java.util.Scanner;
```

5. Convert Celsius to Fahrenheit

Question: Read a temperature in Celsius and convert it using F = (C * 9 / 5) + 32.

```
import java.util.Scanner;
```

6. Swap Two Numbers Using a Temporary Variable

Question: Read two integers and swap their values using a temporary variable. Print the values before and after swapping.

```
import java.util.Scanner;
```

7. Calculate Simple Interest

Question: Read principal, rate, and time. Calculate simple interest using SI = (P * R * T) / 100.

```
import java.util.Scanner;
```

8. Find the Average of Three Numbers

Question: Read three numbers and calculate their average. The result may contain decimal values.

```
import java.util.Scanner;
```
